// I am thinking of adding a
forgot password , you
decide but for
that , another webpage
asking for name & a
few details should be
created //

register.html:

- Programme ▾ Btech, Mtech (dropdown).
- First Name
- Last Name
- Address
- Gender ▾ Male
Female
Other (dropdown)
- Guardian's Name.
- Mobile (Only int is allowed)

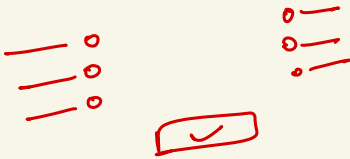

- Initial Account Balance
(only int is allowed)

enterRoll.html

- Roll Number

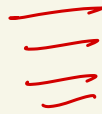

course.html

// Selection from existing list //

Assigning marks:

- courseName []

Account details :

- Credit
- Debit
- Details
- Amount

★ For update grade, 5 subjects
marks and grades for each student
 \therefore for each student,
there are 5 subjects &
 \therefore 5 marks - 5 grades.

// Can we extend this to different
semesters?

Then we'll have another n no. of
arrays for each semester &
each element in that array will
have this division of: Courses,
marks,
grades.

For this, we need to create
another 8 webpages, each
for each semester.

• Backlog [i] for each student

// can be divided into semesters
